

Óscar Calles Sáez

Senior Software Engineer who turns AI-generated implementations and architectural alternatives into validated, maintainable software.

 La Legua • Toledo, Spain • 45005  (+34) 617 02 69 41  ocalles@gmail.com

BIO

Highly driven Senior Software Engineer | Java/Spring Boot + .NET/Angular | Legacy Modernization | AI-Assisted & Agentic Development with over 11 years of experience in full-stack development, backend systems, and mobile applications. I work at the intersection of engineering judgment and agentic development: AI agents propose implementations and architectural alternatives, while I validate trade-offs, maintainability, performance, and alignment with team standards. This human-led validation model has reduced feature delivery time by approximately 30% while keeping technical debt under control.

SKILLS

Languages: Java, TypeScript, JavaScript, C#, Python (learning/fast adoption), Objective-C

Frameworks: Spring Boot, Angular 17, .NET Core, Spring MVC, WPF, Entity Framework, LINQ, J2SE, J2EE

Cloud & Infra: GCP (certified), Terraform, Docker, Azure, CI/CD (Azure DevOps, GitHub Actions)

AI/Agentic: GitHub Copilot Pro, agentic workflows, MCP (Model Context Protocol), AI-assisted code review, automated commit messaging, Cline integration

Security: OAuth2, OpenID, JWT, Spring Security

EDUCATION

Bachelor Degree in Computer Science – Universidad Nacional de Educación a Distancia (UNED), Graduated 2007

EXPERIENCE

Backend: Java 11 / Spring Boot | Frontend: Angular 17

Digital Transformation Agency – Regional Government of Castilla-La Mancha

04/2025 – Present

- Leading development of a new enterprise-grade digital services platform using Java 11, Spring Boot, and Angular 17.
- Designed and implemented RESTful microservices with Spring Data JPA, Spring Security, and OAuth2 authentication.
- Built responsive, component-based frontends with Angular 17, using RxJS, reactive forms, and NgRx for state management.
- Integrated GitHub Copilot Pro to accelerate coding, generating descriptive commit messages and maintaining a docs.md file with every architectural change.
- Extended AI capabilities by designing a Docker-based MCP gateway that centralizes GitHub, SonarQube, SQL, Keycloak, and browser automation tools into a unified local endpoint layer, enabling Cline and similar agents to invoke specialized services without exposing credentials.
- Evolved the development process to an **agentic mode**, where the AI agent proposes code implementations and architectural variations, while I review, validate, and select the best approach based on performance, maintainability, and team style guidelines.
- Reduced feature delivery time by ~30% compared to traditional coding, while keeping technical debt under control through continuous validation and manual oversight.
- Collaborated with product owners and QA to align deliverables with business requirements and non-functional goals (scalability, security, observability).

Java 11 • Spring Boot • Angular 17 • OAuth2 • RxJS • NgRx • Docker • GCP

.NET Software Developer, Full Stack

Accuro Spain

06/2023 – 04/2025

- Public sector government migration project using .NET 7 and Angular 15.
- Modernized legacy modules, refactored business logic, and implemented new micro-frontends.
- Improved test coverage with xUnit and Moq, and ensured CI/CD pipelines with Azure DevOps.

.NET 7 • Angular 15 • xUnit • Moq • Azure DevOps

.NET Software Developer, Full Stack

UST Spain

12/2021 – 04/2023

- VMware migration project using .NET and Angular (12/2021 – 07/2022).
- Developed backend APIs and integrated with external authentication systems.

.NET • Angular • REST APIs • OAuth2

.NET Software Developer

Castilla-La Mancha Media

12/2015 – 11/2021

- Built internal tools using WPF, .NET, console applications, Windows scripting, JavaScript, and Python.
- Maintained and improved legacy systems, reducing response times by 20%.

WPF • .NET • JavaScript • Python

iOS Developer

Gwella

10/2015 – 12/2015

- Developed a health-sector iOS application with Objective-C and REST APIs.

iOS • Objective-C • REST

iOS Developer

Buzinger

03/2015 – 09/2015

- Created an indoor beacon-location iOS app.
- Also contributed to J2EE, SQL, Angular, and Spring MVC projects.

iOS • Objective-C • J2EE • SQL • Angular • Spring MVC

COURSES & CERTIFICATIONS (2022–2023)

Udemy

- Agile Fundamentals (Scrum & Kanban)
- Blazor Bootcamp – .NET 6 E-Commerce (WASM & Server)
- ASP.NET Core + Angular from Scratch
- Building Microservices with ASP.NET Core 5.0 and Docker
- Git Mindset – Underlying Architecture
- Google Cloud Developer – GCP Professional Certification
- Microservices Architecture – Complete Guide, Implementation on .NET 5, Designing Highly Scalable Systems, Observability & Resilience
- Secure .NET Microservices with IdentityServer4, OAuth2, OpenID
- SQL for Beginners (MySQL & Database Design)
- Terraform Beginner to Advanced (GCP)
- The Complete Node.js Developer Course (3rd Edition)
- English Grammar Launch
- Arquitectura de Aplicaciones Empresariales con .NET 7

Pluralsight

- Object-Oriented Programming Fundamentals in C#
- Developing with .NET on Azure – Getting Started
- .NET 6 First Look
- Regular Expressions
- Cross-platform SQL Server Management for Developers (VS Code)
- Using IIS 10 as a Developer
- Angular 11 Fundamentals, Getting Started, NgRx, Reactive Forms, Routing, Component Communication, RxJS, Unit Testing (Angular 12)
- Mocking with Moq and xUnit
