

Dear Hiring Team,

I am a **Senior Software Engineer with 11+ years of professional experience** building and modernizing enterprise software across backend, frontend, cloud, and distributed systems.

My core experience includes **Java, Spring Boot, .NET, Angular, REST APIs, microservices, Docker, cloud platforms, security, and CI/CD**. I have designed and evolved software architectures, modernized legacy applications, and delivered business-critical solutions with a strong focus on maintainability, reliability, and performance.

I also bring hands-on experience with **AI-assisted and agentic software development**, using tools such as **GitHub Copilot, Cline, and MCP** to analyze code, explore architectural alternatives, automate development tasks, and accelerate delivery. This approach has reduced feature delivery time by approximately **30%**, while keeping technical validation and architectural decisions under my responsibility.

I am interested in **Senior Software Engineer, Senior Java/Spring Boot, Full Stack, Software Architect, and Technical Lead** opportunities, particularly with remote-first teams working on modern software, cloud platforms, AI, and enterprise modernization.

I would welcome the opportunity to discuss how I can contribute to your team.

Kind regards,  
**Óscar Calles Sáez**
